Foreword.....	ii
Summary of Changes	xvii
CHAPTER 1 OBJECTIVES	1
1.1 INTRODUCTION.....	1
1.2 PURPOSE.....	1
1.3 SCOPE.....	2
1.3.1 Strength properties and allowables data	3
1.3.2 Volume 1: Guidelines for Characterization of Structural Materials	3
1.3.3 Volume 2: Material Properties	3
1.3.4 Volume 3: Materials Usage, Design, and Analysis Guidelines	4
1.4 USE OF THE DOCUMENT AND LIMITATIONS	4
1.4.1 Roadmaps for use of Volumes 1 - 3	4
1.4.2 Source of information.....	16
1.4.3 Use of data and guidelines in applications	16
1.4.4 Strength properties and allowables terminology.....	16
1.4.5 Use of references	16
1.4.6 Use of tradenames and product names	17
1.4.7 Toxicity, health hazards, and safety.....	17
1.4.8 Ozone depleting chemicals.....	17
1.5 APPROVAL PROCEDURES.....	17
1.6 SYMBOLS, ABBREVIATIONS, AND SYSTEMS OF UNITS.....	18
1.6.1 Symbols and abbreviations.....	18
1.6.1.1 Constituent properties.....	23
1.6.1.2 Laminae and laminates	23
1.6.1.3 Subscripts	24
1.6.1.4 Superscripts.....	25
1.6.1.5 Acronyms.....	26
1.6.2 System of units	27
1.7 DEFINITIONS.....	29
REFERENCES	50
CHAPTER 2 GUIDELINES FOR PROPERTY TESTING OF COMPOSITES	1
2.1 INTRODUCTION.....	1
2.1.1 Building-block approach to substantiation of composite structures.....	1
2.1.2 Test levels and data uses	2
2.1.2.1 Structural complexity levels	2
2.1.2.2 Data application categories	3
2.1.2.3 Test program definition	4
2.2 TEST PROGRAM PLANNING	5
2.2.1 Overview	5
2.2.2 Baseline and alternate approaches for statistically-based properties	6
2.2.3 Issues of data equivalence	6
2.2.4 Test method selection	7
2.2.5 Population sampling and sizing	11
2.2.5.1 Sample size selection.....	11
2.2.5.2 Batch quantity effects on ANOVA	12

2.2.6	Material and processing variation, specimen preparation and NDE	13
2.2.6.1	Materials and material processing.....	13
2.2.6.2	Specimen preparation and NDE	16
2.2.7	Moisture absorption and conditioning factors.....	16
2.2.7.1	Moisture diffusivity	18
2.2.7.2	Moisture equilibrium content.....	18
2.2.7.3	Conditioning and test environment.....	20
2.2.8	Material operational limit (MOL).....	20
2.2.8.1	Steam pressure delamination	24
2.2.8.2	MOL considerations for high temperature composite systems	24
2.2.8.3	Hot Wet Testing - Report Moisture Content at Failure.....	27
2.2.9	Nonambient testing.....	29
2.2.10	Unidirectional lamina properties from laminates.....	29
2.2.11	Data normalization.....	29
2.2.12	Data documentation.....	29
2.2.13	Application specific testing needs.....	31
2.3	RECOMMENDED TEST MATRICES.....	31
2.3.1	Material screening test matrices.....	31
2.3.1.1	Mechanical property screening.....	31
2.3.1.2	Mechanical property screening for high-temperature material systems.....	32
2.3.1.3	Fluid sensitivity screening.....	33
2.3.2	Material qualification test matrices	38
2.3.2.1	Constituent test matrix.....	38
2.3.2.2	Prepreg test matrix	38
2.3.2.3	Lamina test matrices.....	39
2.3.2.4	Filament-wound materials test matrix.....	41
2.3.3	Material acceptance test matrices	42
2.3.4	Alternate material equivalence test matrices.....	42
2.3.4.1	Qualification of alternate source composite materials.....	42
2.3.4.1.1	Introduction.....	42
2.3.4.1.2	Goal and approach.....	42
2.3.4.1.3	Material compatibility.....	43
2.3.4.1.4	Key material or structural performance parameters.....	43
2.3.4.1.5	Success criteria	43
2.3.4.1.6	Lamina-level test matrices for alternate material assessment.....	45
2.3.4.1.7	Laminate-level test matrices for alternate material assessment.....	48
2.3.4.1.8	Alternate material evaluation summary.....	48
2.3.4.2	Evaluation of changes made to previously qualified materials.....	48
2.3.4.2.1	Modification categories.....	50
2.3.4.2.2	Actions required for each modification category	51
2.3.4.2.3	Implementation	51
2.3.4.2.4	Validation test matrices	56
2.3.5	Generic laminate/structural element test matrices	56
2.3.5.1	Introduction	56
2.3.5.2	Overview.....	58
2.3.5.2.1	Lamina strength test matrix.....	58
2.3.5.2.2	Bolt bearing and bearing/bypass strength test matrix.....	60
2.3.6	Alternate approaches to basis values.....	64
2.3.6.1	Lamina mechanical property test matrix for regression analysis	64
2.3.7	Data substantiation for use of basis values from MIL-HDBK-17 or other large databases	66
2.4	DATA REDUCTION AND DOCUMENTATION	67
2.4.1	Introduction	67
2.4.2	Lamina properties from laminates	67
2.4.2.1	Methodology	68
2.4.2.2	Tension strength tests.....	69

2.4.2.3	Compression strength tests	70
2.4.2.4	Other properties	70
2.4.3	Data normalization	70
2.4.3.1	Normalization theory	71
2.4.3.2	Normalization methodology	71
2.4.3.3	Practical application of normalization	74
2.4.4	Dispositioning of Outlier Data	75
2.4.5	Data documentation	78
2.5	MATERIAL TESTING FOR SUBMISSION OF DATA TO MIL-HDBK-17	78
2.5.1	Introduction	78
2.5.2	Material and process specification requirements	80
2.5.3	Sampling requirements	80
2.5.3.1	Additional requirements for B and A data classes	81
2.5.3.2	Data pooling	81
2.5.4	Conditioning requirements	82
2.5.5	Test method requirements	82
2.5.6	Data documentation requirements	82
2.5.7	Data normalization	87
2.5.8	Statistical analysis	87
2.5.9	Mechanical properties of laminae and laminates	87
2.5.9.1	Unidirectional properties from laminates	87
2.5.9.2	Strength and strain-to-failure	87
2.5.9.3	Elastic moduli, Poisson's ratios, and stress/strain curves	88
2.5.10	Chemical properties	88
2.5.11	Physical properties of laminae and laminates	88
2.5.11.1	Density	88
2.5.11.2	Composition	88
2.5.11.3	Equilibrium moisture content	88
2.5.11.4	Moisture diffusivity	88
2.5.11.5	Coefficient of moisture expansion	88
2.5.11.6	Glass transition temperature	88
2.5.12	Thermal properties	89
2.5.12.1	Coefficient of thermal expansion	89
2.5.12.2	Specific heat	89
2.5.12.3	Thermal conductivity	89
2.5.12.4	Thermal diffusivity	89
2.5.13	Electrical properties	90
2.5.14	Fatigue	90
REFERENCES	92

CHAPTER 3 EVALUATION OF REINFORCEMENT FIBERS 1

3.1	INTRODUCTION	1
3.2	CHEMICAL TECHNIQUES	1
3.2.1	Elemental analysis	1
3.2.2	Titration	2
3.2.3	Fiber structure	2
3.2.4	Fiber surface chemistry	2
3.2.5	Sizing content and composition	5
3.2.6	Moisture content	5
3.2.7	Thermal stability and oxidative resistance	5
3.2.8	Chemical resistance	5
3.3	PHYSICAL TECHNIQUES (INTRINSIC)	6
3.3.1	Filament diameter	6
3.3.2	Density of fibers	6

3.3.2.1	Overview	6
3.3.2.2	ASTM D 3800, Standard Test Method for Density of High-Modulus Fibers	7
3.3.2.3	Recommended procedure changes to Section 6.6.4.4.1 (helium pycnometry) for use in measuring fiber density	8
3.3.2.4	Density test methods for MIL-HDBK-17 data submittal	8
3.3.3	Electrical resistivity	8
3.3.4	Coefficient of thermal expansion	9
3.3.5	Thermal conductivity	9
3.3.6	Specific heat	9
3.3.7	Thermal transition temperatures	9
3.4	PHYSICAL TECHNIQUES (EXTRINSIC)	9
3.4.1	Yield of yarn, strand, or roving	9
3.4.2	Cross-sectional area of yarn or tow	10
3.4.3	Twist of yarn	10
3.4.4	Fabric construction	10
3.4.5	Fabric areal density	10
3.5	MECHANICAL TESTING OF FIBERS	10
3.5.1	Tensile properties	10
3.5.1.1	Filament tensile testing	11
3.5.1.2	Tow tensile testing	11
3.5.1.3	Fiber properties from unidirectional laminate tests	14
3.5.2	Filament compression testing	14
3.6	TEST METHODS	14
3.6.1	Determination of pH	14
3.6.1.1	Scope	14
3.6.1.2	Apparatus	14
3.6.1.3	Procedure	15
3.6.2	Determination of amount of sizing on carbon fibers	15
3.6.2.1	Scope	15
3.6.2.2	Apparatus	15
3.6.2.3	Materials	16
3.6.2.4	Procedure	16
3.6.2.5	Calculation	16
3.6.2.6	Preparation of crucibles for reuse	17
3.6.3	Determination of moisture content or moisture regain	17
3.6.3.1	Scope	17
3.6.3.2	Apparatus	17
3.6.3.3	Sample preparation	17
3.6.3.4	Procedure	17
3.6.3.5	Calculations	18
3.6.4	Determination of fiber diameter	18
3.6.4.1	Description and application	18
3.6.4.2	Apparatus	18
3.6.4.3	Calibration	20
3.6.4.4	Prepare slide	20
3.6.4.5	Measuring procedure	20
3.6.4.6	Calculation	21
3.6.5	Determination of electrical resistivity	21
3.6.5.1	Scope	21
3.6.5.2	Apparatus	21
3.6.5.3	Sample preparation	21
3.6.5.4	Procedure	21
3.6.5.5	Calculation	21
3.6.5.6	Calibration and maintenance	22
3.6.5.7	Definition of units of measurement	22

REFERENCES	23
CHAPTER 4 MATRIX CHARACTERIZATION	1
4.1 INTRODUCTION.....	1
4.2 MATRIX SPECIMEN PREPARATION.....	1
4.2.1 Introduction	1
4.2.2 Thermoset polymers	2
4.2.3 Thermoplastic polymers.....	3
4.2.4 Specimen machining.....	3
4.3 CONDITIONING AND ENVIRONMENTAL EXPOSURE	4
4.4 CHEMICAL ANALYSIS TECHNIQUES	4
4.4.1 Elemental analysis	4
4.4.2 Functional group and wet chemical analysis	4
4.4.3 Spectroscopic analysis	4
4.4.4 Chromatographic analysis	6
4.4.5 Molecular weight and molecular weight distribution analysis	6
4.4.6 General scheme for resin material characterization	7
4.5 THERMAL/PHYSICAL ANALYSIS AND PROPERTY TESTS	14
4.5.1 Introduction	15
4.5.2 Thermal analysis.....	15
4.5.3 Rheological analysis	16
4.5.4 Morphology	17
4.5.5 Density/specific gravity	17
4.5.5.1 Overview	17
4.5.5.2 Recommended procedure changes to Sections 6.6.4.2, 6.6.4.3 and 6.6.4.4 (D 792, D 1505 and helium pycnometry) for use in measuring cured resin density.....	18
4.5.5.3 Density test methods for MIL-HDBK-17 data submittal	18
4.5.6 Volatiles content.....	19
4.5.7 Moisture content	19
4.6 STATIC MECHANICAL PROPERTY TESTS	20
4.6.1 Introduction	20
4.6.2 Tension.....	20
4.6.2.1 Introduction	20
4.6.2.2 Specimen preparation.....	20
4.6.2.3 Test apparatus and instrumentation	21
4.6.2.4 Tensile test methods for MIL-HDBK-17 data submittal.....	22
4.6.3 Compression.....	22
4.6.3.1 Introduction	23
4.6.3.2 Specimen preparation.....	23
4.6.3.3 Test apparatus and instrumentation	23
4.6.3.4 Limitations.....	24
4.6.3.5 Compressive test methods for MIL-HDBK-17 data submittal.....	24
4.6.4 Shear	24
4.6.4.1 Test methods available	24
4.6.4.2 Torsion specimen preparation	25
4.6.4.3 Iosipescu shear specimen preparation.....	25
4.6.4.4 Test apparatus and instrumentation	25
4.6.4.5 Limitations.....	25
4.6.4.6 Shear testing methods for MIL-HDBK-17 data submittal	25
4.6.5 Flexure.....	26
4.6.5.1 Introduction	26
4.6.5.2 Specimen preparation.....	26
4.6.5.3 Test apparatus and instrumentation	26

4.6.5.4	Flexural test methods for MIL-HDBK-17 data submittal	27
4.6.6	Impact	27
4.6.7	Hardness	27
4.7	FATIGUE TESTING	27
4.8	TESTING OF VISCOELASTIC PROPERTIES	28
	REFERENCES	29
 CHAPTER 5 PREREG MATERIALS CHARACTERIZATION		1
5.1	INTRODUCTION	1
5.2	CHARACTERIZATION TECHNIQUES - OVERVIEW	1
5.3	SAMPLING	2
5.4	PHYSICAL CHARACTERISTICS AND PROPERTY TESTS	2
5.4.1	Physical description of reinforcement	2
5.4.1.1	Alignment	2
5.4.1.2	Gaps	2
5.4.1.3	Width	3
5.4.1.4	Length	3
5.4.1.5	Edges	3
5.4.1.6	Splices	3
5.4.2	Resin content	3
5.4.3	Fiber content	3
5.4.4	Volatiles content	3
5.4.5	Moisture content	4
5.4.6	Inorganic fillers and additives content	4
5.4.7	Areal weight	4
5.4.8	Tack and drape	4
5.4.9	Resin flow	4
5.4.10	Gel time 4	4
5.5	TEST METHODS	4
5.5.1	Resin extraction procedure for epoxy resin prepregs	4
5.5.2	Procedure for HPLC/HPSEC analysis of glass, aramid, and graphite fiber prepregs	6
5.5.2.1	Reverse phase HPLC analysis	6
5.5.2.2	Size Exclusion Chromatography (SEC) analysis	7
5.5.3	Procedure for Fourier transform infrared spectroscopy (FTIR)	7
5.5.4	Procedure for differential scanning calorimetry (DSC)	7
5.5.5	Procedure for dynamic mechanical analysis (DMA)	8
5.5.6	Procedure for rheological characterization	8
	REFERENCES	9
 CHAPTER 6 LAMINA, LAMINATE, AND SPECIAL FORM CHARACTERIZATION		1
6.1	INTRODUCTION	1
6.2	SPECIMEN PREPARATION	1
6.2.1	Introduction	1
6.2.2	Traceability	2
6.2.3	Test article fabrication	2
6.2.4	Specimen fabrication	3
6.3	CONDITIONING AND ENVIRONMENTAL EXPOSURE	4
6.3.1	Introduction	4
6.3.2	Fixed-time conditioning	5
6.3.3	Equilibrium conditioning	6
6.3.3.1	Accelerating conditioning times	7

6.3.3.2	Procedural hints.....	8
6.4	INSTRUMENTATION AND CALIBRATION.....	10
6.4.1	Introduction.....	10
6.4.2	Test specimen dimensional measurement.....	10
6.4.2.1	Introduction.....	10
6.4.2.2	Calibrated microscopes.....	10
6.4.2.3	Micrometers.....	10
6.4.2.4	Scaled calipers.....	11
6.4.2.5	Precision scales.....	11
6.4.2.6	Rulers and tape measures.....	12
6.4.2.7	Special hole diameter measuring devices.....	12
6.4.2.8	Calibration of dimensional measurement devices.....	12
6.4.3	Load measurement devices.....	12
6.4.3.1	Introduction.....	12
6.4.3.2	Load cells.....	13
6.4.3.2.1	Design and specification considerations.....	13
6.4.3.3	Other load measuring systems.....	14
6.4.3.4	Instrumentation and calibration.....	14
6.4.3.5	Precautions.....	15
6.4.4	Strain/displacement measurement devices.....	15
6.4.4.1	Introduction.....	15
6.4.4.2	LVDT (Linear Variable Differential Transformer) deflectometers.....	16
6.4.4.3	Contacting extensometers.....	16
6.4.4.3.1	Contacting extensometers, applications.....	16
6.4.4.4	Bondable resistance strain gages.....	17
6.4.4.4.1	Strain gage selection.....	17
6.4.4.4.2	Surface preparation and bonding of strain gages.....	17
6.4.4.4.3	Strain gage circuits.....	17
6.4.4.4.4	Strain gage instrumentation.....	18
6.4.4.4.5	Strain gage instrumentation calibration.....	19
6.4.4.5	Other methods.....	19
6.4.4.5.1	Optical methods of extensometry.....	19
6.4.4.5.2	Capacitance extensometers.....	20
6.4.4.6	Special considerations for textile composites.....	20
6.4.5	Temperature measurement devices.....	20
6.4.5.1	Introduction.....	20
6.4.5.2	Thermocouples.....	20
6.4.5.3	Metallic resistive temperature devices.....	21
6.4.5.4	Thermistors.....	22
6.4.5.5	Bimetallic devices.....	22
6.4.5.6	Liquid expansion devices.....	22
6.4.5.7	Change-of-state devices.....	22
6.4.5.8	Infrared detectors.....	23
6.4.5.9	Calibration of temperature measurement devices.....	23
6.4.6	Data acquisition systems.....	26
6.5	TESTING ENVIRONMENTS.....	26
6.5.1	Introduction.....	26
6.5.2	Laboratory ambient test environment.....	26
6.5.3	Non-ambient testing environment.....	26
6.5.3.1	Introduction.....	26
6.5.3.2	Subambient testing.....	27
6.5.3.3	Above ambient testing.....	27
6.6	THERMAL/PHYSICAL PROPERTY TESTS.....	28
6.6.1	Introduction.....	28
6.6.2	Extent of cure.....	28
6.6.3	Glass transition temperature.....	29

6.6.3.1	Overview	29
6.6.3.2	T _g Measurements.....	29
6.6.3.2.1	Differential scanning calorimetry (DSC)	29
6.6.3.2.2	Thermomechanical analysis (TMA).....	30
6.6.3.2.3	Dynamic mechanical analysis (DMA).....	32
6.6.3.3	Glass transition test methods for MIL-HDBK-17 data submittal	33
6.6.3.4	Crystalline melt temperature.....	33
6.6.4	Density	34
6.6.4.1	Overview	34
6.6.4.2	ASTM D 792, Standard Test Method for Density and Specific Gravity (Relative Density) of Plastics by Displacement	34
6.6.4.3	ASTM D 1505, Standard Test Method for Density of Plastics by the Density-Gradient Technique	35
6.6.4.4	Use of helium pycnometry to determine density of composites	36
6.6.4.4.1	Helium pycnometry test procedure for determining composite density	38
6.6.4.5	Summary of helium pycnometry experimental results.....	39
6.6.4.6	Density test methods for MIL-HDBK-17 data submittal.....	40
6.6.5	Cured ply thickness	40
6.6.5.1	Overview	41
6.6.5.2	Thickness measurement using direct means	41
6.6.5.3	Thickness measurement using indirect means	41
6.6.5.4	SRM 10R-94, SACMA Recommended Method for Fiber Volume, Percent Resin Volume and Calculated Average Cured Ply Thickness of Plied Laminates	42
6.6.5.5	Cured ply thickness test methods for MIL-HDBK-17 data submittal	42
6.6.6	Fiber volume (V _f) fraction	42
6.6.6.1	Introduction	42
6.6.6.2	Matrix digestion.....	42
6.6.6.3	Ignition loss	43
6.6.6.4	Areal weight/thickness	43
6.6.6.5	Determination of fiber volume using image analysis	45
6.6.6.5.1	Background	45
6.6.6.5.2	Apparatus	45
6.6.6.5.3	Specimen preparation	45
6.6.6.5.4	Image analysis	46
6.6.6.5.5	Sources of error.....	47
6.6.7	Void volume (V _v) fraction	48
6.6.7.1	Introduction	48
6.6.7.2	Digestive evaluation.....	48
6.6.7.3	Determination of void volume using image analysis	49
6.6.7.3.1	Background	49
6.6.7.3.2	Sources of Error	50
6.6.8	Moisture/diffusivity	52
6.6.8.1	Standard test methods.....	53
6.6.8.2	Moisture diffusion property test methods for MIL-HDBK-17 data submittal.....	54
6.6.9	Dimensional stability (Thermal and Moisture)	54
6.6.9.1	Dimensional stability (thermal)	55
6.6.9.1.1	Introduction.....	55
6.6.9.1.2	Existing test methods	55
6.6.9.1.3	Test specimens.....	56
6.6.9.1.4	Test apparatus and instrumentation	57
6.6.9.1.5	CTE test methods for MIL-HDBK-17 data submittal	57
6.6.9.2	Dimensional stability (moisture).....	58
6.6.9.2.1	Introduction.....	58

6.6.9.2.2	Specimen preparation	59
6.6.9.2.3	Test apparatus and instrumentation	59
6.6.9.2.4	CME test methods for MIL-HDBK-17 data submittal	60
6.6.10	Thermal conductivity	60
6.6.10.1	Introduction	60
6.6.10.2	Available methods	60
6.6.10.2.1	ASTM C177-97	61
6.6.10.2.2	ASTM E1225-99	62
6.6.10.2.3	ASTM C518-98	63
6.6.10.2.4	Fourier thermal conductivity test method for flat plates	64
6.6.10.3	Thermal conductivity test methods for MIL-HDBK-17 data	68
6.6.11	Specific heat	68
6.6.11.1	Introduction	68
6.6.11.2	Available method	68
6.6.11.2.1	ASTM E1269-95	68
6.6.11.3	Specific heat test methods for MIL-HDBK-17 data submittal	70
6.6.12	Thermal diffusivity	70
6.6.12.1	Introduction	70
6.6.12.2	Available test methods	71
6.6.12.2.1	ASTM E1461-92	71
6.6.12.2.2	ASTM C714-85	76
6.6.12.3	Thermal diffusivity test methods for MIL-HDBK-17 data submittal	76
6.6.13	Outgassing	76
6.6.14	Absorptivity and emissivity	77
6.6.15	Thermal cycling	77
6.6.16	Microcracking	77
6.6.16.1	Introduction	77
6.6.16.2	Microcracking due to the manufacturing process	77
6.6.16.3	Microcracking due thermal cycling	78
6.6.16.4	Microcracking due to mechanical loading/cycling	78
6.6.17	Thermal oxidative stability (TOS)	78
6.6.18	Flammability and smoke generation	78
6.6.18.1	Introduction	78
6.6.18.2	Fire growth test methods	78
6.6.18.2.1	ASTM E 84 - Surface burning characteristics of building materials	79
6.6.18.2.2	ASTM E 162 - Surface flammability of materials using a radiant heat energy source	80
6.6.18.2.3	ISO 9705 fire test – full-scale room test for surface products	81
6.6.18.2.4	ASTM E 1321 - Determining material ignition and flame spread properties	81
6.6.18.3	Smoke and toxicity test methods	82
6.6.18.3.1	ASTM E 662 - Specific optical density of smoke generated by solid materials	82
6.6.18.3.2	NFPA 269 - Developing toxic potency data for use in fire hazard modeling	83
6.6.18.4	Heat release test methods	84
6.6.18.4.1	ASTM E-1354 - Heat and visible smoke release rates for materials and products using an oxygen consumption calorimeter	84
6.6.18.4.2	ASTM E 906 – Heat and visible smoke release rates for materials and products	85
6.6.18.5	Fire resistance test methods	86
6.6.18.5.1	ASTM E-119 - Fire tests for building construction and materials	86
6.6.18.5.2	ASTM E-1529 - Determining effects of large hydrocarbon pool fires on structural members and assemblies and UL 1709 - Rapid rise fire tests of protection materials for structural steel	87
6.7	ELECTRICAL PROPERTY TESTS	87

6.7.1	Introduction	87
6.7.2	Electrical permittivity	88
6.7.3	Dielectric strength	88
6.7.4	Magnetic permeability	88
6.7.5	Electromagnetic interference	88
6.7.6	Electrostatic discharge	88
6.8	STATIC UNIAXIAL MECHANICAL PROPERTY TESTS	88
6.8.1	Introduction	88
6.8.2	Tensile properties	89
6.8.2.1	Overview	90
6.8.2.2	In-plane tension test methods	91
6.8.2.2.1	Straight-sided specimen tension tests	91
6.8.2.2.2	Filament-wound tubes	94
6.8.2.2.3	Width tapered specimens:	94
6.8.2.2.4	Split-disk ring tension test	95
6.8.2.2.5	Sandwich beam test	95
6.8.2.3	Out-of-plane tensile test methods	97
6.8.2.3.1	Introduction	97
6.8.2.3.2	Direct out-of-plane loading adaptations of ASTM C 297/C 633/D 2095	97
6.8.2.3.3	Curved beam approach to out-of-plane tensile strength	102
6.8.2.4	Tension test methods for MIL-HDBK-17 data submittal	102
6.8.3	Compressive properties	104
6.8.3.1	Overview	104
6.8.3.2	In-plane compression tests	105
6.8.3.2.1	ASTM D 3410/D 3410M, Compressive Properties of Polymer Matrix Composite Materials With Unsupported Gage Section by Shear Loading	105
6.8.3.2.2	ASTM D 6484, Compressive Properties of Polymer Matrix Composite Laminates Using a Combined Loading Compression (CLC) Test Fixture	106
6.8.3.2.3	ASTM D 5467, Compressive Properties of Unidirectional Polymer Matrix Composites Using a Sandwich Beam	109
6.8.3.2.4	ASTM C 393, Flexural Properties of Flat Sandwich Constructions	110
6.8.3.2.5	ASTM D 695, Compressive Properties of Rigid Plastics	111
6.8.3.2.6	SACMA SRM 1R, Compressive Properties of Oriented Fiber-Resin Composites	112
6.8.3.2.7	SACMA SRM 6, Compressive Properties of Oriented Cross-Plied Fiber-Resin Composites	113
6.8.3.2.8	Through-thickness compression tests	114
6.8.3.3	Compressive test methods for developing MIL-HDBK-17 data submittal	114
6.8.4	Shear properties	116
6.8.4.1	Overview	116
6.8.4.2	In-plane shear tests	117
6.8.4.2.1	$\pm 45^\circ$ tensile shear tests	117
6.8.4.2.2	Iosipescu shear test	119
6.8.4.2.3	Rail shear tests	123
6.8.4.2.4	Ten-degree off-axis shear test	123
6.8.4.2.5	Tube torsion tests	124
6.8.4.3	Out-of-plane shear tests	125
6.8.4.3.1	Short-beam strength tests	125
6.8.4.3.2	Iosipescu shear test	126
6.8.4.3.3	ASTM D 3846-79, Test Method for In-Plane Shear Strength of Reinforced Plastics	126
6.8.4.4	Shear test methods for MIL-HDBK-17 data submittal	127
6.8.5	Flexural properties	128

6.8.6	Fracture toughness properties	128
6.8.6.1	Overview	128
6.8.6.2	General discussion	129
6.8.6.3	Mode I test methods	131
6.8.6.3.1	Double cantilever beam (DCB) test, ASTM D 5528	131
6.8.6.3.2	Other mode I tests	133
6.8.6.4	Mode II test methods	133
6.8.6.4.1	End notched flexure (ENF) test	133
6.8.6.4.2	Other mode II tests	134
6.8.6.5	Mode III test methods	134
6.8.6.6	Mixed mode test methods	135
6.8.6.6.1	Mixed mode specimen or crack lap shear (CLS)	135
6.8.6.6.2	Mixed mode bending (MMB) test	135
6.8.6.6.3	Edge delamination test	136
6.8.6.7	Fracture toughness tests for MIL-HDBK-17 data submittal	137
6.9	UNIAXIAL FATIGUE TESTING	137
6.10	MULTIAXIAL MECHANICAL PROPERTY TESTING	137
6.11	VISCOELASTIC PROPERTIES TESTS	138
6.11.1	Introduction	138
6.11.2	Creep and stress relaxation	138
6.12	FORM-SPECIFIC MECHANICAL PROPERTY TESTS	139
6.12.1	Tests unique to filament winding	139
6.12.1.1	Overview	139

CHAPTER 8 STATISTICAL METHODS.....		1
8.1	INTRODUCTION.....	1
8.1.1	Overview of methods for calculating statistically-based properties	1
8.1.2	Computer software	1
8.1.3	Symbols	1
8.1.4	Statistical terms.....	3
8.2	BACKGROUND.....	7
8.2.1	Statistically-based design values	7
8.2.2	Basis values for unstructured data	7
8.2.3	Basis values in the presence of batch-to-batch variability.....	8
8.2.4	Batches, panels, and confounding.....	9

8.2.5	Sample size guidelines for determining basis values.....	10
8.2.5.1	Example.....	11
8.2.5.2	Mean and standard deviations of normal basis values	11
8.2.5.3	Basis values using the ANOVA method.....	13
8.3	CALCULATION OF STATISTICALLY-BASED MATERIAL PROPERTIES.....	14
8.3.1	Guide to computational procedures.....	14
8.3.2	Subpopulation compatibility - structured or unstructured	16
8.3.2.1	Notation for grouped data	16
8.3.2.2	The k-sample Anderson-Darling test	17
8.3.3	Detecting outliers	18
8.3.3.1	The maximum normed residual	18
8.3.4	Basis values for unstructured data	19
8.3.4.1	Goodness-of-fit tests.....	19
8.3.4.2	Two-parameter Weibull distribution	20
8.3.4.2.1	Estimating the shape and scale parameters of a Weibull distribution	20
8.3.4.2.2	Goodness-of-fit test for the two-parameter Weibull distribution	23
8.3.4.2.3	Basis values for the two-parameter Weibull distribution	23
8.3.4.3	Normal distribution.....	23
8.3.4.3.1	Estimating the mean and standard deviation parameters for the normal distribution	24
8.3.4.3.2	Goodness-of-fit test for the normal distribution	24
8.3.4.3.3	Basis values for the normal distribution	24
8.3.4.4	Lognormal distribution	25
8.3.4.5	Nonparametric basis values	25
8.3.4.5.1	Nonparametric basis values for large samples	25
8.3.4.5.2	The Hanson-Koopmans method	26
8.3.5	Basis values for structured data	26
8.3.5.1	Regression analysis of linear statistical models	26
8.3.5.2	Analysis of variance.....	28
8.3.5.2.1	Levene's test for equality of variances	29
8.3.5.2.2	The F-test for equality of means.....	30
8.3.5.2.3	One-way ANOVA computations based on individual measurements.....	30
8.3.5.2.4	One-way ANOVA computations based on summary statistics	31
8.3.5.2.5	The ANOVA table for a one-way model.....	31
8.3.5.2.6	Calculation of summary statistics for one-way ANOVA basis values	32
8.3.5.2.7	Calculations for three or more batches	32
8.3.5.2.8	Calculations for two batches	33
8.3.5.3	Simple linear regression	33
8.3.5.4	Basis values using pooling of structured data	35
8.3.6	Exploratory data analysis.....	36
8.3.6.1	The quantile box plot	36
8.3.6.2	The informative quantile function.....	38
8.3.7	Examples of computational procedures	40
8.3.7.1	Problem 1 - Outlier detection, multiple-sample tests, and the Weibull distribution	40
8.3.7.2	Problem 2 - Normal distribution	45
8.3.7.3	Problem 3 - Lognormal distribution.....	49
8.3.7.4	Problem 4 - Nonparametric method	51
8.3.7.5	Problem 5 - Hanson-Koopmans method	51
8.3.7.6	Problem 6 - Analysis of variance (ANOVA) method	52
8.3.7.7	Problem 7 - Linear regression	56
8.3.7.8	Problem 8 - Simple linear regression with a random effect.....	61
8.3.7.9	Problem 9 - One-way mixed-model ANOVA: basis values with data from multiple sources.....	63

8.4	STATISTICAL METHODS	65
8.4.1	Tests for determining equivalency between an existing database and a new dataset for the same material	65
8.4.2	Alternate material statistical procedures.....	68
8.4.2.1	Comparing two groups of batches.....	68
8.4.3	Confidence intervals for the coefficient of variation.....	71
8.4.3.1	Example of CV confidence interval calculation	71
8.4.3.2	Comment on the approximation	72
8.4.4	Statistical procedures for process control.....	72
8.4.4.1	\bar{x} bar chart including batch effect.....	72
8.4.4.2	s^2 chart for the within-batch component of variance	75
8.4.4.3	Test for trend in batch means	75
8.4.5	Average stress-strain curves and bearing load-deformation curves	77
8.4.5.1	Fitting equations	79
8.5	STATISTICAL TABLES AND APPROXIMATIONS.....	81
8.5.1	Quantiles of the F-distribution.....	81
8.5.2	Quantiles of the χ^2 distribution	82
8.5.3	Upper-tail quantiles for the t-distribution.....	82
8.5.4	Two-tail probabilities for the t-distribution	82
8.5.5	Upper-tail probabilities for the standard normal distribution	82
8.5.6	Critical values for the k-sample Anderson-Darling test at the $\alpha = 0.05$ significance level.....	82
8.5.7	Critical values for the MNR outlier test	82
8.5.8	One-sided B-basis tolerance factors, V_B , for the Weibull distribution.....	82
8.5.9	One-sided A-basis tolerance factors, V_A , for the Weibull distribution.....	83
8.5.10	One-sided B-basis tolerance factors, k_B , for the normal distribution	83
8.5.11	One-sided A-basis tolerance factors, k_A , for the normal distribution	84
8.5.12	Ranks, r_B , for determining nonparametric B-basis values	84
8.5.13	Ranks, r_A , for determining nonparametric A-basis values	84
8.5.14	Nonparametric B-basis values for small sample sizes	84
8.5.15	Non-parametric A-basis values for small sample sizes	84
8.5.16	Critical values for approximate confidence limits on the coefficient of variation	84
8.5.17	One-sided tolerance factors for acceptance limits on mean values, for normal distribution.....	84
8.5.18	One-sided tolerance factors for acceptance limits on individual values, for normal distribution.....	85
8.5.19	Upper and lower tail quantiles for two-sided t-distribution	85
	REFERENCES	110
